BIOFRACTAL ANALYSIS OF PROJECTS CARRIED OUT BY ARQKA

5.5- Cosmoteluric plans

For Centro Amma, the geometric telluric grid, anthropomorphic geometric grid, cosmic geometric grid, geological fractures, underground rivers, implosion points, explosion points, Ley lines, Hartmann reticle, Palm reticle, Peyre reticle, Curry reticle were made and neutralized. , Wissmann grid, archaeo-astronomical orientations, base geometries, iteration geometries and fractal geometries.

Each of these grids was located using high precision measurements with specialized German equipment and advanced dowsing techniques as well as conceptual references of geo localization and geo spatial reference. Locating the implosion point, a telluric geometric grid was extrapolated to locate all the functions related to the feminine, the curved lines, the implosion points or those functions that were predominantly directed towards the earth and its benefits. The second geometric grid is anthropomorphic linking the earth with the sky and corresponds properly to the people who will inhabit the space. Finally, the cosmic geometric grid corresponds to the connections to the sky, to the masculine, the straight lines.

With respect to anomalies or geopathies in the field, we have verified with different projects and over ten years of experience that the best way to handle the waves in a way that they emit is to locate at the entrance and exit of each of them, a Hidden geometry made of metal thread that corresponds to the diameter of the unit of measurement of the project, in this case 1.11 m. The geometry in question is woven on a hardwood template and buried in the specific place.
